THE 41 BRAIN FUNCTIONS OF AMBIENT AI

Mapping Cognitive Neuroscience Pillars to Cloud Primitives & Ergonomic Human Interfaces

[41 Brain Functions]
Spanning 6 Cognitive Pillars

[95% Friction Absorbed]
Machine shoulders execution load

[Miller's Law Shield]
Protects ~4 human working slots

[100% Reversible]
Proactive action + armed rollback

Cognitive Pillar & Brain Region	Key Functions (Total 41)	Cloud / OS Primitives	Ambient AI Ergonomic Role (What the Human Experiences)
PILLAR 1: PERCEIVE & ATTEND **Thalamus, Salience Network**	Sensory Gating, Salience Allocation, Prediction Error, Multimodal Fusion, Spatial Mapping (7 funcs)	`EventBridge, CloudWatch Logs, OpenSearch, File Watchers`	**Noise Filter & Triage HUD**: Ingests 87 unread emails, terminal logs, and system alerts; suppresses 95% background noise and surfaces only the 1 critical action card.
PILLAR 2: REMEMBER **Hippocampus, Prefrontal Cortex**	Working Memory Buffer, Episodic Retrieval, Semantic Index, Consolidation, Principled Forgetting (7 funcs)	`DynamoDB, Redis ElastiCache, S3 Vector, Bedrock Knowledge Bases`	**Topological Intent Graph**: Retains intent dependencies across turns (Turn N-1 'Post link' -> Turn N 'Build app'). Relieves human working memory from keeping mental checklists.
PILLAR 3: THINK & DECIDE **DLPFC, Basal Ganglia, ACC**	Executive Planning, Response Inhibition, Error Monitoring, Reality Monitoring, Counterfactual Logic (8 funcs)	`AWS Step Functions, Bedrock Agentic Loop, Circuit Breakers`	**Low-Entropy 'Go' & Inhibition Gate**: Decomposes 'Go' into an executable DAG. *Inhibits* the chatbot impulse to ask trivial questions on safe, reversible tasks.
PILLAR 4: LEARN & FEEL **Amygdala, Insula, VTA Dopamine**	Reward Prediction Error, Somatic Markers, Metacognition, Insight Synthesis, Homeostatic Alarms (6 funcs)	`Composite CloudWatch Alarms, Bedrock Guardrails, Feedback Ledgers`	**Confidence & Risk Gate**: Evaluates execution safety. High confidence + low risk = silent execution. If a somatic safety threshold is breached, triggers a 1-click human veto.
PILLAR 5: ACT & REGULATE **Motor Cortex, Hypothalamus**	Motor Tool Execution, Token Streaming, Lateral Inhibition, Homeostatic Reversibility, Rate Limits (5 funcs)	`AWS Lambda, Local Subshells, WAF Quotas, Transaction URNs`	**Silent Motor Execution & Armed Undo**: Runs headless browser tests (0 console errors), compiles code, pushes Git, dispatches APIs, and automatically arms 1-click rollback scripts.
PILLAR 6: CONNECT & AWARE **Global Workspace (GWT), Callosum**	Global Workspace Broadcast, Hemisphere Transfer, Multi-Agent Voting, Ambient Vigilance Daemons (8 funcs)	`SNS Fanout, EventBridge Pipes, Cron Schedules, Subagent Mesh`	**Global Workspace HUD & Vigilance**: Broadcasts the finished product into a single peripheral card. Keeps silent background vigilance over CI/CD pipelines until green.

THE GOLDEN ERGONOMIC RULE: All 41 brain functions execute continuously in the subconscious machine layer; only one unified, actionable decision card surfaces into the conscious human HUD (~4 slots protected).
