

The Universal Triad: Cognitive, Project Management, Leadership & Mindfulness

One-page summary. Three concentric rings (Inner, Core, Outer), each with four skill lenses. Awareness sits at the center of all of them.

Cognitive skills Mind: how you think

Project management Delivery: how you ship

Leadership skills Lead: how you guide

Mindfulness skills Awareness: how you notice

RING 1: INNER The Engine

Control, structure & clarity. "What are we building, and what are the rules of physics?"

Control & Logic

Goal planning: turn fuzzy wishes into step-by-step plans; halt bad impulses.

Root-cause logic: decide from facts, axioms, and what-if tests.

Scope & Timing

Project scope: capture 100% of deliverables with no bloat or feature creep.

Bottleneck chains: find the critical path that sets the launch date.

Lead Self

Strategic focus: say no to 99 good distractions to protect the one that matters.

Emotional control: stay calm under pressure; ignore shiny objects.

Notice the impulse

Breathe before acting: one breath before planning or answering.

Ask: does this serve the plan, or am I reacting?

Pause: breathe before acting

RING 2: CORE The Balance

Integrity, state & honesty. "Where are our blind spots, and how do we stay truthful?"

Self-Critique & Memory

Self-critique: audit your work like a tough editor; measure doubt before guessing.

Working memory: turn hard-won lessons into permanent playbooks.

Quality & Risk Radar

Done checklist: non-negotiable quality criteria (tests pass, no security holes).

Risk radar: run pre-mortems; track assumptions before they expire.

Lead Systems

Radical truth culture: reward early bad news; kill "yes-man" bias.

Institutional playbooks: build guardrails that don't rely on heroics.

Notice your thinking

Self-awareness: see your doubts, biases, and expired assumptions as they appear.

Honest check: is this fact or story?

Pause: check your thinking

RING 3: OUTER The World

Reach outward to people and inward to self. "How do we engage people, release safely, and reinvent?"

Empathy & Creative Leaps

People empathy: read unstated intent; help views reach consensus.

Wild exploration: refuse copy-paste answers; push boundaries for breakthroughs.

Clear Comms & Safe Launch

Bottom-line updates: answer in sentence one; assign a single owner.

Safe launch: ship with verified rollback; investigate without blame.

Lead Enterprise

Executive presence: read the room; build trust with stakeholders.

Creative reinvention: disrupt your own model before rivals do.

Be present

Outward: give people full attention when listening.

Inward: notice whether you are exploring or avoiding.

Pause: listen fully

Fractal law: 1 mind (cognition) = 10 people (project delivery) = 10,000 people (corporate leadership). The same skills scale up.

Speaking framework: picture a funnel. **Heard** (their concern), **Real** (the real issue), **Proof** (evidence), **Decision** (what we do). Wide to narrow, with one breath after the first sentence.
